WATERPROOF

The protective safety mattresses are made of PVC Tarpaulin. They are 100 % impermeable and frost-resistant. They withstand temperatures from -30°C to + 70°C. The padding is also water-resistant and made of hard poly ethylene.

FLEXIBLE

In cooperation with the biggest ski resorts in Europe and the actual ski resort builders, we have developed a mattress that is characterized by high flexibility thanks to its special shape. It creates a protective barrier which is unmatched considering its universal use.

SECURE

The best way to prevent injuries caused by impact is the use of safety mattresses (fenders). A circular shaped shock absorber is the best solution for the security of ski resorts, its shock absorption is more efficient compared to the traditional upholstery foam padding.

Traditional ski barriers are made-to-order in a L- or U-shape of a cylindrical or flat shape. All these types are bulky and can be used only for a given shape. Our innovative design replaces all the mentioned shapes of ski cushions.

Instead of the present solutions, you will have our flexible safety mattress on your slopes that is resistant to weather, pitfalls and especially safer for skiers.

SIZES AND TYPES

2,2 x 1,2m - vertical

Because of the variability that they offer, our protective safety mattresses are available in three sizes. They can be bent, stacked and combined into one unit. The thickness of the mattress is 10 cm.

1,2 x 1,2m

2,2 x 1,2m - horizontal

PRICE

Printing prices:
1,2x1,2m = 30 eur
2,2x1,2m = 50 eur

SIZE:	
1,2 x 1,2 m	90 €
2,2 x 1,2 m horizontal	180 €
2,2 x 1,2 m vertical	180 €

Available in these colors:

Prices incl. VAT

If the basic safety rules are met, slope accidents can almost always be prevented. The best way to prevent injuries caused by impact is the use of safety mattresses (fenders). Unlike traditional security mattress our innovative design is flexible and fully customizable to different types of obstacles. This is the main reason why these protective mattresses are the no. 1 choice among the luxury ski resorts and winter sports enthusiasts.

By bending, folding (stacking) or by combining of these unique safety mattresses, whose main task is to protect skiers and snowboarders enjoying their time on the slopes, you can now quickly and easily change the variability of different types of obstacles. On a safety mattress is sufficient to cover a tree or a pole and by connecting of several mattresses you can create a whole safety wall or barrier.

In order to ensure the highest level of protection on the slopes, our exclusive safety mattresses are designed from the finest materials. They are completely water resistant and also resistant to moisture which distinguishes them from the common safety mattresses. In reality this means that they can withstand the most extreme weather fluctuations and remain unchanged throughout the year.

As an advantage, we can print the name of a team or a company logo on the front face of the mattress which can (for example) serve advertising purposes, which leads to greater visibility of your company. Order a safety mattress today and provide security to skiers and snowboarders who are heading to your slopes this season.

USAGE: for childrens in schools, cycling, water sports, karts, jumping area, etc.
